Re.: Letter of Endorsement.

Dear Eric,

Sharp manufactures the very best in digital imaging products with the highest quality components, electrical power provided by power companies across Canada are not responsible for the quality of power. Reliable power filtration is important to maintain the optimum performance for digital imaging products. Fluctuations such as spikes and noise can create service calls and lost productivity in the work environment.

Therefore, after a thorough technical evaluation of power protection devices in this market we have chosen ESP as the Sharp Canada partner for all our power protection needs.

ESP offers the following advantages:

- **Cat 5e, ETL Verified connectivity.** This will ensure that your network performance will not be dropped down while being protected from surges.
- **Open ground safety shut off.** To prevent unnecessary service calls should a ground connection be missing.
- **Lifetime product warranty.** This lifetime warranty covers parts, shipping and labor should a properly connected ESP power filter fail. (AC, RJ-45 and RJ-11).

Please feel free to contact Eric Langlois at [eric@realpowerprotection.com](mailto:eric@realpowerprotection.com) or 919-269-6968 ext. 229 for further information.

Sincerely,

Anthony LoGiudice  
Assistant Vice President, Service  
Sharp Electronics of Canada Ltd
