

PRODUCTS: ALL

**SUBJECT: 120VAC, 15A Line Filter Announcement**

OPERATIONAL GROUPS: XCL Only

**ANNOUNCEMENT:**

The National Technical Support Group is pleased to announce the availability of a state of the art, 120VAC, 15 Amp Line Filter.

**Strategy**

The Line Filter will help minimize the number of calls generated by power surges and unstable supply voltages (i.e., reloading of software). The Line Filter is designed to protect sensitive equipment by effectively preventing any surges to get past the filter. The filter also has protection for both a network and a phone line, as well as two auxiliary AC outlets located at the top of the unit. A security cable is also included to prevent any loss through theft (refer to the photo below).
