

**Now**  
you can use  
15 Amp or 20 Amp  
equipment,

in a 30 Amp outlet!

In cases when a 30 Amp outlet is currently installed, the ESP Digital QC Convertible Power Filter enables you to use 208-240V/15 or 20 Amp equipment in a 208-240V/30 Amp outlet/source.

This means with ESP's Digital QC Convertible you'll have no need to rewire, no costly charges from an electrician, and you'll be backed by the same noise filtration and surge protection as ESP's Digital QC Power Filter.

### Features

- > Enables 208-240 Volt/15 Amp or 20 Amp equipment to be used in a 30 Amp outlet
- > Designed for Segment 4, 5, and 6 multifunctional copiers, printers, scanners, servers, computers, mailing systems, and networked equipment.
- > Features a patented three stage filtration and surge protection system that virtually eliminates ground noise and damage caused by power surges, spikes, and electrical noise.
- > Provides Cat5e ETL Verified Network Surge Protection to ensure trouble-free network connections and maximum signal integrity.
- > Fax/Modem DSL Filter prevents unwanted crossover and reduces radio signals (RFI), which can be picked up by unbalanced phone systems.
- > Eliminates risk of electric shock hazards caused by improperly grounded outlets.
- > Includes a Lifetime Protection Guarantee that provides coverage from damage caused by power related "Acts of God"
- > FCC registered, Industry Canada certified, and Cat5e ETL Verified to guarantee compatibility.
